Purpose of Contact: Sample location changes for IHSS Group 400-7, B452 area

Discussion As described in the IASAP Addendum #IA-02-05 for IHSS Group 400-7, 4 surface and subsurface soil samples were to be collected in the 0-1/2 ft and 1/2 foot to 2 1/2 ft intervals in the area immediately adjacent and under B452. While these samples were primarily designed to determine if contamination was present from an historic sulfuric acid spill, a full suite of analyses were to be collected. However, during Decommissioning activities on July 30th, some of this soil was removed.

To meet the intent of the IASAP Addendum, on the afternoon of July 30th the following steps were taken:

- 4 soil samples were collected at the newly exposed surface. These samples are representative of the deeper interval at the locations identified in the IASAP Addendum.
- Surface and subsurface samples were collected as planned from a location previously beneath the B452 slab that was now exposed and relatively undisturbed.
- Grab samples were collected from the two piles of previously removed dirt and will be analyzed for the full suite of samples.
- All samples will be analyzed on a rush turnaround basis.

The RISS D&D Project covered the soil pile at the B850 area. The soil pile at the B452 area was not covered as it is located in the area where it was derived and it is expected to be of approximately the same concentrations as the surrounding soils.

It is expected that these soils will not exceed action levels as this area was anticipated not to require a remedial action. If these soil results exceed action levels, additional actions may be required and will be communicated when information is received.
